

12  
5. (Amended) A ventricle drain according to claim 1, wherein the fastening means of the fastener comprises threads for establishment of a screw joint between the fastener and the fixture by axial rotation of the fastener.

6.  
6. (Amended) A ventricle drain according to claim 1, wherein the seal is adapted to have at least a first and a second shape corresponding to a first and a second position of the fastener in relation to the seal, and wherein at least the first position provides a sealed engagement between the seal and the catheter.

7.  
7. (Amended) A ventricle drain according to claim 1, wherein the catheter is reinforced against radial pressure at least in a part of its length.

8.  
8. (Amended) A ventricle drain according to claim 1, wherein the catheter is reinforced by means of a body inserted into the catheter

9.  
9. (Amended) A ventricle drain according to claim 1, further comprising a valve having a first port attached to the free end of the catheter, a second port attached to a place of disposal of the bodily fluids and a third port, said valve having means for selectively connecting one of either the second part or the third port to the first port.

11.  
11. (Amended) A ventricle drain according to claim 9, further comprising a one-way valve between the second port and the place of disposal so as to avoid the bodily fluids to flow from the place of disposal to the catheter.

12.  
12. (Amended) A ventricle drain according to claims 9, wherein the third port is adapted for injection of fluids into the free end of the catheter.

13.  
13. (Amended) A ventricle drain according to claim 9, wherein the valve further comprises a fourth port with a soft rubber seal adapted for injection of fluids into the free end of the catheter.

14.  
14. (Amended) A catheter for a ventricle drain according to claim 1, wherein the catheter has an intermediate part and two end parts, the intermediate part of the
